Why buy Kerio MailServer?

Stronger security

Kerio MailServer's anti-spam protection is just as robust as an appliance, saving you from having to purchase additional anti-spam protection.

Less complicated

You may need to use at least 7 different consoles to administer and configure a Microsoft Exchange infrastructure. With Kerio MailServer there is only one highly-intuitive administration console to handle it all.

Less IT overhead

Administering Exchange can be a full time job. Kerio MailServer can be installed and ready to go in less than 30 minutes. Organizations with little or no IT staff can just set it and forget it.

Problems solved faster

Kerio MailServer has multiple releases each year to address issues, feature requests and add new improvements. Average releases for Exchange take more than a year.

More cost effective

Get the collaboration features that your organization need without paying for the high upfront cost, administration costs, and necessary third party add-ons.
